

# DIGITALSKILLS AND SKURIO ANNOUNCE NEW PARTNERSHIP TO BRING DIGITAL RISK PROTECTION TO PORTUGAL

# SKURIO

**Lisbon, Monday 15<sup>th</sup> March 2021:** DigitalSkills, a leading IT security and cybersecurity consultancy in Portugal announced a new partnership with Skurio, a leader in digital risk protection technology. The deal brings an innovative new capability to Digital Skill's portfolio, adding a data centric approach to cybersecurity that is now available to businesses across the country.

The Skurio Digital Risk Protection platform is a fully automated solution that searches the surface, deep and Dark Web for breaches of critical business data and potential cyber-threats to an organisation. The solution offers protection to customers from risks and threats to revenue, reputation, and regulatory compliance, to keep them safe and minimise damage and costs from a breach.

Skurio's Chief Executive Officer, **Jeremy Hendy** commented:

*"Our partnership with DigitalSkills marks an important milestone for Skurio in our geographic expansion, and we look forward to working with their team and their substantial partner network in Portugal. As the cyber-threat landscape continues to grow, it is vital that businesses can access technologies like Digital Risk Protection through their trusted suppliers. We believe it's relationships like this that will help Digital Risk Protection become a standard component of every company's cybersecurity strategy."*

DigitalSkills Chief Executive Officer, **António Abelha** commented:

*"These days, digital information is one of the most valuable assets of companies. For this reason, this Partnership with Skurio makes great sense for us as a strategy, which helped us not only to strengthen our portfolio, but also to guarantee Portuguese companies a digital risk protection while enjoying Skurio solutions in our market."*

### **ABOUT SKURIO:**

Skurio looks for cyber threats specific to an organisation, giving a single view of all data breaches and threats outside the network. Additional features help protect data across the supply chain with synthetic identities and protect the business from brand impersonation with typosquatting monitoring. Open APIs integrate valuable alerts into SOC and ITSM workflow systems to automate breach response. Founded in 2011, Skurio is based in Belfast with staff across the UK. Skurio's highly skilled team of threat analysts work at the leading edge of business threat intelligence and digital risk protection, providing customers with the support they need to extend their in-house expertise. Our partner and distribution network serves hundreds of customers in 33 countries.

### **ABOUT DIGITALSKILLS:**

In 2015, under the MN CD E&T Project (Multinational Cyber Defense Education and Training Project lead by NATO), it was important to gather a set of certified professionals in the area of Information Security (i.e., Cybersecurity area), to fill a gap not only national level but also for all countries that are part of this project.

Since then, DigitalSkills has a main objective: to protect Portuguese companies, their systems and infrastructures, their assets, data and professionals, with the latest solutions on the international market that aim to increase their cyber-resilience to cyber security attacks.

For the past 5 years, we have been visiting major international events, investigating cybersecurity companies that stand out worldwide for their innovative solutions and talking to professionals who, in fact, get their hands dirty and work hard with the main focus on protecting companies and their systems, in order to provide Portuguese entities with recent solutions and achieve our goal.

DigitalSkills intends to position itself in the market as a distributor of unique solutions in this area and, for this, it has strong international partners at its side – and now with our enriched portfolio through this our new partnership with Skurio.
